

Name : Lê Hữu Trọng

1 / A PHP function to calculate the sum of all odd .

```
<?php
Function SumOld ($array)
{
$lenght = count($array);
$sum = 0;
for ($i = 0 ; $i < $lenght ; $i++)
{
if($array[$i] % 2 == 1 )
{
sum+= $array[$i];
}
}
return sum;
}
?>
```

2/ Write a SQL query that gets the list of students who **don't** attend any course (based on the given data), sorted by alphabetical order of student names. (the result table has two columns: `student\_id`, `student\_name`).

SQL query :

```
Select id as student_id , name as student_name
from student
where id not in select ( student_id from counrse_register )
```
